

## Working with Fractions – Remedial Lesson 2

**Grade:** Applicable Knowledge and Skills to All High School Math Courses

**Subject:** Remedial Math

**Check out more at** [www.bjrichardsonmath.weebly.com](http://www.bjrichardsonmath.weebly.com)

**Driving Question:** How do I add and subtract fractions?

**Purpose:** Very few high school mathematics teachers would argue that students numeracy skills diminish when working with fractions. The goal of this lesson is to refresh or reteach students about adding and subtracting fractions. The lesson hinges on the idea of creating equivalent fractions to make fractions of the same ‘type’.

Equivalent fractions are at the basis of understanding for most of the arithmetic operations with fractions. Although multiplication isn’t properly introduced yet, it is used as a method to create equivalent fractions at this stage.

It should be noted that because these lessons are focused on remedial study, they will make brief attempts at understanding but ultimately strive for efficiency.

**Prior Knowledge:** Students should be aware of the natural, whole, and integer number systems, as well as basic arithmetic operations with these systems. Basic number sense is also assumed.

Ideally the students would have also studied the previous lesson or have a strong concept of what a fraction is, its parts, what an equivalent fraction is, and how to create equivalent fractions through multiplication by a clever form of one.

**Screencast Link(s):**

*Addition and Subtraction of Fractions* - <https://www.youtube.com/watch?v=mEuZxFPGf3U>

**Expected Time:** The design of this lesson is to be an individualized system of instruction, thus time would depend directly on the students’ progress. If attempting as an entire class the lesson would likely take one 75-minute period (this includes assessment tasks).

**Resources:**

Requires Internet  
Access

**(Tools & Tech)**

**Lesson Procedure**

*Due to the nature of the lesson, the educator’s role becomes addressing issues after the student has had time to work through the lesson. The resource in that sense is a truly flipped lesson, but the resources within could easily be used within a blended model.*

*I do: Assess the student’s current skills with fractions and if required, direct the to the student instruction form.*

**[Student Instruction Form:](#)**

*If possible, find some time to go over the students assessments and show them how their difficulties with fractions are directly impacting the achievement of their outcomes. You may ask students to point out areas where fractions have cost them on the assessment. This provides the student and opportunity to find, analyze, and evaluate their skills with guidance.*

- find and validate** – Let the students find areas on assessments that were difficult due to adding or subtracting fractions
- critically think and analyze** – Look at what skills in particular would've benefited your ability to demonstrate understanding
- collaborate and communicate** - The teacher should direct the student to the remedial lesson and then both should trouble shoot any difficulties, technology or otherwise, the student might have in completing the lesson.

*You do:*

*The students should began by watching the screencast listed above. This video will take the student through a brief explanation of how adding fractions is not much different than adding apples (like terms).*

*It approaches the topic from the idea of making fractions that are of the same type, typically referred to as common denominator. The video purposefully avoids using this term as I believe students should approach the concept from a 'like terms' standpoint.*

*Now the student needs time to assess their understanding. The following links will take the student to the Khan Academy. The activities that have been selected should provide the necessary formative feedback and practice for the student to master the skills and knowledge.*

*Within these activities, the students are provided a series of questions. They are encouraged to try and get 5 in a row correct (reflecting understanding and possibly mastery). The students are provided a scratch pad option to write on, a hint button that provides help, and easy access to additional videos/examples to assist.*

*The students should attempt the activities until they feel they've reached a level of mastery...and then do a few more to be sure. The following screen shots and links show where to find the selected activities.*

## Adding Fractions with unlike denominators:

[https://www.khanacademy.org/math/pre-algebra/fractions-pre-alg/fractions-unlike-denom-pre-alg/e/adding\\_fractions](https://www.khanacademy.org/math/pre-algebra/fractions-pre-alg/fractions-unlike-denom-pre-alg/e/adding_fractions)

The screenshot shows a Khan Academy practice interface. The main heading is "Adding fractions with unlike denominators". Below it, the instruction says "Practice adding fractions that have different denominators." The problem is  $\frac{1}{6} + \frac{1}{4} = ?$ . There is an input box for the answer. On the right, there are buttons for "Check Answer", "Show me how", and "I'd like a hint". Below that, there is a "Stuck? Watch a video." section with a video player and a list of video titles: "Example of adding fraction", "How to add fractions that have different denominators", and "Adding and subtracting fractions". At the bottom right, there is a "Report a mistake in this question" link.

## Subtracting fractions with unlike denominators:

[https://www.khanacademy.org/math/pre-algebra/fractions-pre-alg/fractions-unlike-denom-pre-alg/e/subtracting\\_fractions](https://www.khanacademy.org/math/pre-algebra/fractions-pre-alg/fractions-unlike-denom-pre-alg/e/subtracting_fractions)

The screenshot shows a Khan Academy practice interface. The main heading is "Subtracting fractions with unlike denominators". Below it, the instruction says "Practice subtracting fractions that have different denominators." The problem is  $\frac{2}{4} - \frac{4}{10} = ?$ . There is an input box for the answer. On the right, there are buttons for "Check Answer", "Show me how", and "I'd like a hint". Below that, there is a "Stuck? Watch a video." section with a video player and a list of video titles: "Example of subtracting fraction" and "Adding and subtracting fractions". At the bottom right, there is a "Report a mistake in this question" link.

## Adding and subtracting negative fractions:

[https://www.khanacademy.org/math/pre-algebra/fractions-pre-alg/fractions-unlike-denom-pre-alg/e/adding\\_and\\_subtracting\\_fractions](https://www.khanacademy.org/math/pre-algebra/fractions-pre-alg/fractions-unlike-denom-pre-alg/e/adding_and_subtracting_fractions)

The screenshot shows a Khan Academy practice interface. The main heading is "Adding and subtracting negative fractions". Below it, the instruction says "Practice adding and subtracting positive and negative fractions." The problem is "Reduce to simplest form." followed by  $6\frac{1}{3} + \left(-\frac{1}{6}\right) = ?$ . There is an input box for the answer. On the right, there are buttons for "Check Answer", "Show me how", and "I'd like a hint". Below that, there is a "Stuck? Watch a video." section with a video player and a list of video titles: "Adding fractions with different denominators" and "Adding and subtracting fractions". At the bottom right, there is a "Report a mistake in this question" link.

	<p><input type="checkbox"/> <b>remember, understand, evaluate, leverage</b> - the students are being asked to connect the knowledge and skills remembered from the screencasts to understanding the tasks in the activities. In solving the tasks of the activities, the students are leveraging the remembered knowledge to meet the goal. If they need additional support from the provided examples or supplementary videos, they must evaluate the information being presented before leveraging it.</p> <p><input type="checkbox"/> <b>collaborate</b> – the apps could easily be done in groups or with parents. The possibilities for collaboration exist. The ‘challenge’ idea mentioned above could easily be done in groups.</p>									
	<p><i>We do: On the student instruction form, there is a section where the student must submit up to five questions the student still has concerning the topic. The student should submit these to the teacher and when possible (extra help, during a work period, etc.) the teacher should address these.</i></p> <p><i>After this the student should complete a small creative piece demonstrating their understanding of the content. This piece should be something that can be shared either physically or electronically. The goal of the piece is for the student to step in the role of the educator and create something that they feel would help others who struggled as they did. If the student has completed a task like this from a previous lesson, they should be encouraged to choose a different method of presentation from there last OR combine multiple pieces into one larger resource.</i></p> <p><i>Some suggestions for creative pieces:</i></p> <table data-bbox="435 1157 1446 1272"> <tr> <td><i>Screencast</i></td> <td><i>Show Me Composition</i></td> <td><i>Weebly or Blog Site</i></td> </tr> <tr> <td><i>PowerPoint / Prezi</i></td> <td><i>Poster</i></td> <td><i>NearPod Lesson</i></td> </tr> <tr> <td><i>A song/Poem</i></td> <td></td> <td></td> </tr> </table>	<i>Screencast</i>	<i>Show Me Composition</i>	<i>Weebly or Blog Site</i>	<i>PowerPoint / Prezi</i>	<i>Poster</i>	<i>NearPod Lesson</i>	<i>A song/Poem</i>		
<i>Screencast</i>	<i>Show Me Composition</i>	<i>Weebly or Blog Site</i>								
<i>PowerPoint / Prezi</i>	<i>Poster</i>	<i>NearPod Lesson</i>								
<i>A song/Poem</i>										
	<p><input type="checkbox"/> <b>critically think, analyze, synthesize</b> – the students need to critically analyze their understanding and skill to synthesize questions they still have.</p> <p><input type="checkbox"/> <b>create</b> – the students need to create a piece that demonstrates their understanding and can be used as a teaching tool for others.</p> <p><input type="checkbox"/> <b>communicate</b> – the piece that they develop has to communicate clearly their understanding and be accessible by those who would struggle with the topic also.</p>									
	<p><i>We share: The student should then meet with the teacher to receive feedback on it. If the piece is satisfactory, and if the student is comfortable, they should find a forum to share their piece. This could be accessible online or displayed in the classroom.</i></p>									
	<p><input type="checkbox"/> <b>collaborate, communicate</b> – the student should be able to communicate to all audiences what they have learned and how to apply the skills and knowledge.</p>									

- publish** – together, the teacher and student should find a way to publish the work if the student is comfortable.
- citizenship** – through sharing their work, the student is contributing to their classroom and other's education.

**WRAP UP/REMINDERS:** With respect to the creative piece developed by the student, the nature of this piece could easily be adapted. For example, the student may choose to demonstrate their knowledge of fractions, and then extrapolate this showing applications to rational algebraic expressions in the curriculum. In this way the student is linking the remedial knowledge directly to applicable outcomes within your specified course.

**Evaluation:** Ideally, the teacher should see a reduction in the amount of fraction related errors that the student commits while attempting to demonstrate outcomes requiring this prerequisite knowledge.

**Alternatives:**

**If students are not keen on the idea of video education or would benefit from a more text based approach, the following sites are recommended for their simplicity and content.**

**Adding Fractions – [https://www.mathsisfun.com/fractions\\_addition.html](https://www.mathsisfun.com/fractions_addition.html)**

**Subtracting Fractions - [https://www.mathsisfun.com/fractions\\_subtraction.html](https://www.mathsisfun.com/fractions_subtraction.html)**
